

VenturaMax[®]

LIQUID

Indication

For post vaccination reactions after administration of both live and inactivated vaccines against

- Acute Infectious Bursal Disease (IBD) and reactions to New Castle Disease infection
- Infectious Laryngotracheitis
- Avian Influenza
- Infectious Bronchitis

Dosage

For Drinking Water System

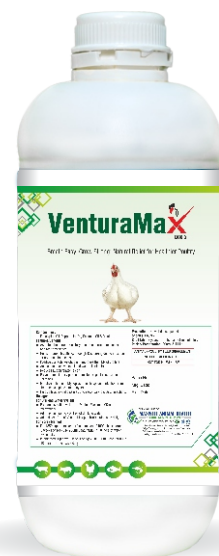

- Prepare a solution with 10ml VenturaMax and 500ml warm water
- Add this solution to 40 litres of drinking water
- Administer 10ml of VenturaMax per 1000 birds twice daily

For Spray Method

- For 1250 square meter surface area and 24000 chickens (upto 3 weeks of age) use 250ml VenturaMax in 10 liters of water twice daily
- In older fowls (above 3 weeks of age) use 500ml VenturaMax in 10liters of water twice daily

Available Pack

250ml & 1 Ltr.

Caution: Don't use VenturaMax together with antibiotics or any product in water.

VenturaMax[®]

LIQUID

Immune suppression in flocks is a major cause of secondary infections (Respiratory infections) in chicken and it leads to...

Herbal combination of Immunomodulators and Immunopotentiators

VenturaMax

LIQUID

Eucalyptus Oil

- A potent Immunomodulator, increases the level of monocytes (WBC) in the blood
- Has Antibacterial activity against bacterial species such as H. influenza, H. parainfluenzae, S. maltophilia and S. pneumonia
- Clinically proven to increase the productivity of layers

International journal of Poultry sciences. Pg 445-449, 2008)

Immunocompromised broilers given essential oils of eucalyptus & peppermint showed reduction in morbidity & rales just 2 days post IBV challenge

Significantly protect the respiratory system tissues against co-infection by viral infections by maintaining the cilia & goblet cells of the epithelial layer of trachea, thinning of mucus & reducing hypertrophy of mucous layer

Peppermint Oil

- Obtained from the plant Mentha Piperita
- Potentiates both innate-cell mediated and humoral immune responses in chickens
- Commonly used for the common cold, cough, inflammation of the mouth & throat, sinus infections and respiratory infections

Menthol

- Counter irritant, helps in reducing inflammation
- Helps in relieving pain & irritation because of its local Anaesthetic & Analgesic properties

Calamus Oil

- Acts as antibacterial & antifungal agent

Benefits

- The volatile oils have a potent immunomodulatory effect on immune response of birds to vaccines (Awaad et. al., 2010)
- Helps improve breathing, used for cough & sneezing due to infectious or non-infectious cause
- Positively affects weight gain and improves the FCR of broilers
- Acts as an effective aerial and water disinfection
- Reduces *E. coli* related lesions
- Prevents respiratory problems related to post vaccination reactions
- Effective in clearing *Mycoplasma gallisepticum* infection from the tracheal epithelium of layers
- Helps alleviate viral diseases and secondary bacterial infections
